

## w15-p1: finish search form

The screenshot shows a web application with a search form and a list of cocktails. The search form is located at the top left, with a search button. The list of cocktails is displayed below the search form, showing the name of the cocktail and a corresponding image. The cocktails listed are Apple Car and Apple Jack. The search form is currently empty, and the list of cocktails is displayed below it.

```
1 import get from './getElement.js';
2 import presentDrinks from './presentDrinks_76.js';
3
4 const form = get(".search-form");
5 const input = get("[name='drink']");
6
7 const baseURL = "https://www.thecocktaildb.com/api/json/v1/1/search.php?s=";
8
9 form.addEventListener("keyup", (e) => {
10   e.preventDefault();
11   console.log("input", input.value);
12   const value = input.value;
13   if (!value) return;
14   presentDrinks(`${baseURL}${value}`);
15 });
```

```
1 import presentDrinks from './src/presentDrinks_76.js';
2 import './searchForm_76.js';
3
4 const URL = "https://www.thecocktaildb.com/api/json/v1/1/search.php?s=d";
5
6 window.addEventListener("DOMContentLoaded", () => {
7   presentDrinks(URL);
8 });
```

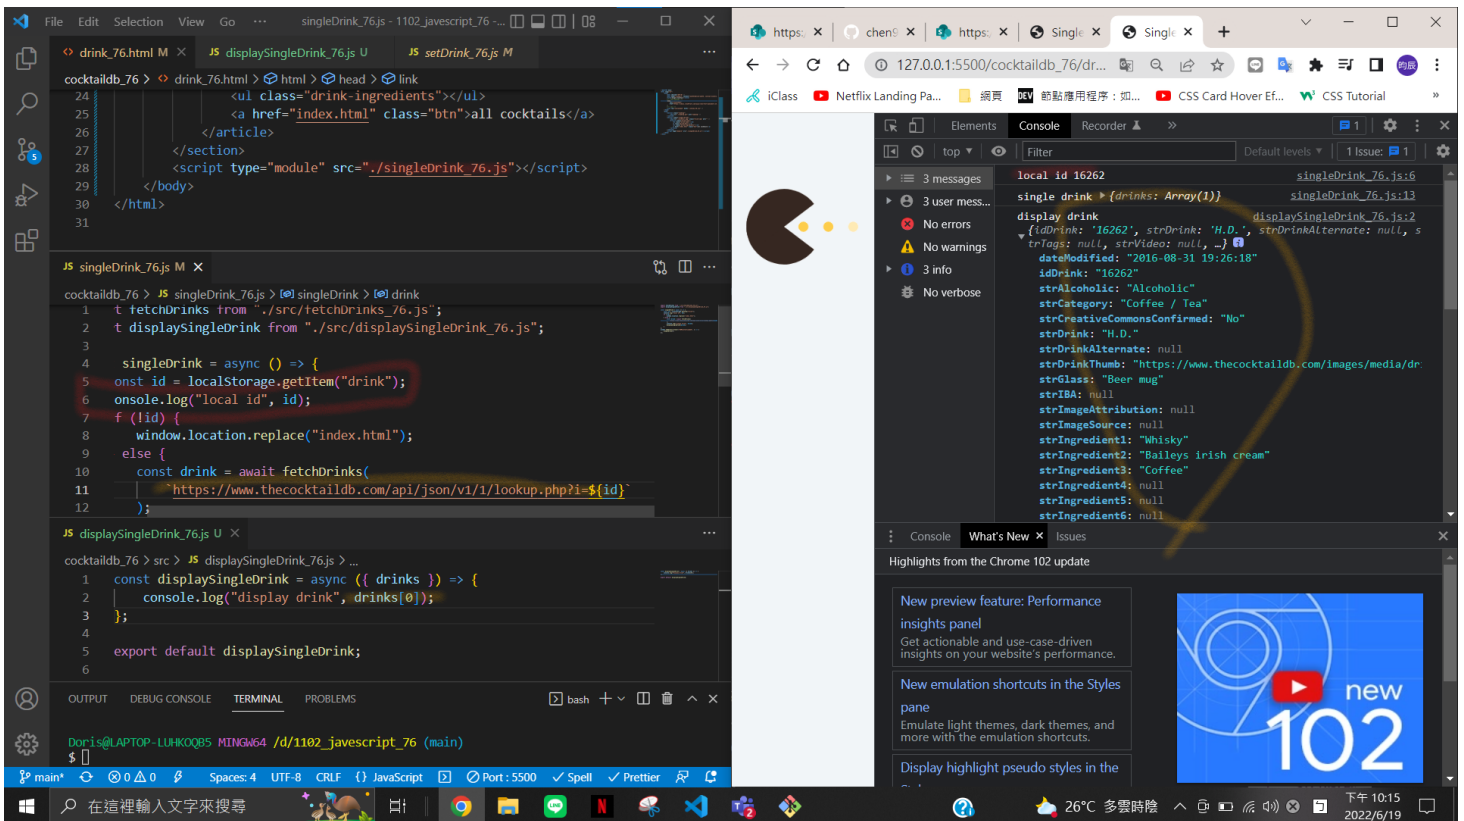

## w15-p2: Get data-id of a drink, save to local storage

The screenshot shows a web application with a search form and a list of cocktails. The search form is located at the top left, with a search button. The list of cocktails is displayed below the search form, showing the name of the cocktail and a corresponding image. The cocktails listed are Adam and Acid. The search form is currently empty, and the list of cocktails is displayed below it.

```
1 import fetchDrinks from './fetchDrinks_76.js';
2 import setDrink from './setDrink_76.js';
3 import displayDrinks from './displayDrinks_76.js';
4
5 const presentDrinks = async (url) => {
6   //fetch drinks
7   const data = await fetchDrinks(url);
8   console.log("drinks data", data);
9   const section = await displayDrinks(data);
10   if (section) {
11     setDrink(section);
12   }
13 };
14
15 export default presentDrinks;
```

```
1 const setDrink = (section) => {
2   section.addEventListener("click", (e) => {
3     e.preventDefault();
4     console.log("data-id", e.target.parentElement.dataset.id);
5     const id = e.target.parentElement.dataset.id;
6     localStorage.setItem("drink", id);
7   });
8 };
9
10 export default setDrink;
```

## w15-p3: Get drink info based on data-id, and show the data
